

The Inventor's Project Manager and the Entrepreneur's Office Manager.

The A.N. Creation Office is free bots for running a small business, set up in Grok, eight in all. The first two: one takes an idea to a product that sells, one runs the business, whatever it sells. Pick the one that fits your work, or use both, make a bot in Grok, and paste a short message from **ancreationoffice.com**. It starts setting itself up and asks one question at a time, helps you set up a private place to save the work, then asks what you're working on.

Pick one, or both

	A good first job	What you get back
The Inventor's Project Manager (Project Manager Bot)	Tell it your idea in a few sentences	Your idea read back, what's known, what isn't, the next question or experiment
The Entrepreneur's Office Manager (Office Manager Bot)	Tell it about your business	A one-page plan: what you sell, to whom, the price, break-even, the one number to watch

When the business needs running

The Entrepreneur's Office Manager keeps a one-page plan with pricing and break-even, customers and invoices with follow-ups, a short money check each month, and a compliance calendar of licenses, reports and taxes traced to the agencies' own pages. Before a meeting with a lender, investor, accountant or attorney, it builds the packet that person will want.

When the product needs the plant

The Inventor's Project Manager brings that work in itself: a molding defect worked through from your readings, a design-for-molding review tied to your drawing revision, a draft control plan linked to your evidence, or supplier quotes compared like for like.

The two bots share one project folder and pass work to each other. Each prepares the work for your review; you make the decisions. They are written for Grok and Grok bots, but they run on plain written procedures, linked to each other, so any AI model that can read a web link can follow them.

Six more, and how far along they are

The Freelancer's Business Developer, the Small Business's Government Desk, the Provider's Program Starter, the Household's Benefits Desk, the Voter's Congress Watch and the Citizen's Federal Reporter each have their own page. **Every bot is marked Experiment:** new and still being tried, so check its work.

Who built it, and what it costs

Mike Maier, Advance Now LLC: 30+ years in engineering and manufacturing, many of them developing products with first-time inventors and small companies. B.S. Mechanical Engineering (UW–Madison), Six Sigma Black Belt, U.S. Air Force veteran. **The bots are free.** You need at least a SuperGrok subscription and somewhere to keep the project folder, such as Google Drive or OneDrive. Every instruction is open on GitHub (mminwi/an-creation-office). Use it for your own inventions and business, even for things you sell (CC BY-NC-SA 4.0).
